Lilongwe, Malawi

PROFESSIONAL SUMMARY

IT student at NACIT pursuing a Level 5 Diploma in Computing with Business Management. Passionate about cybersecurity and software engineering, with hands-on experience building a Network Intrusion Detection System from scratch using Python and Scapy. Proficient in Python, JavaScript, and modern web frameworks. Eager to contribute technical skills to a dynamic IT environment.

EDUCATION

National College of Information Technology (NACIT) Expected 2028

Level 5 Diploma in Computing with Business Management (Current)

- **Relevant Coursework:** Backend Web Development, Big Data Analysis and Data Science, Mobile App Development.

Level 4 Diploma in Computing with Business Management (Completed 2025)

- **Relevant Coursework:** Frontend Web Development, Computer Networks, Databases, eBusiness, Understanding Business Organizations, Essentials of Business Management.

Level 3 Diploma in Computing (Completed 2025)

- **Relevant Coursework:** Python Programming, Web Technologies, Computer Science, Object Oriented Programming, System Analysis and Design.

EXPERIENCE

Web Developer – NexaCode | Next.js 14, Tailwind CSS, JavaScript | 2026

Live: <https://nexa-web-swart.vercel.app/>

- Designed and built the company's primary marketing and business platform on a modern web stack
- Architected on Next.js for performance and SEO; deployed to Vercel for zero config scaling
- Implemented responsive design using Tailwind CSS with clear visual hierarchy for service offerings
- Diagnosed and resolved critical Content Security Policy (CSP) nonce mismatch causing sitewide hydration failures
- Integrated Playwright E2E testing with automated validation pipeline before production deploys

- Established improvement roadmap: SEO hardening, WCAG accessibility compliance, security hardening and code modernization

VOLUNTEER EXPERIENCE

Media & Data Volunteer – Theatre Renaissance Cabaret International Festival 2026

Mwezi Arts | Lilongwe, Malawi | July – August 2026

- Supported a 5-day international theater festival with 11 participating countries (Brazil, France, Tunisia, Zambia, Zimbabwe, etc.)
- Collected and curated media content (footage, data) from TV stations and individual contributors for multi-platform social media distribution
- Collaborated with an international team during live event operations, ensuring timely content delivery across all festival platforms
- Managed on-site logistics: accreditation, equipment coordination (laptop-based workflow), and real-time problem-solving in a fast-paced environment

PROJECTS

Network Intrusion Detection System (NIDS) | Python, Scapy, Flask, Chart.js | Jan – June 2026

GitHub: github.com/Thando-rgb/NIDS

- Built a fully functional NIDS from scratch without tutorials, independently researching and solving every technical challenge encountered
- Captures live network traffic using Scapy and detects three attack types in real time — port scans, SYN flood attacks and ARP sweep reconnaissance
- Implemented detection logic using sliding time window thresholds to accurately identify suspicious behavior patterns
- Built a persistent logging system with timestamps recording all detections to file
- Developed a live web dashboard using Flask and Chart.js with real time auto-refresh, color coded alerts, a doughnut chart showing attack breakdown and a detailed events table
- Tested using Kali Linux as an attacker VM and Windows as the defender, launching real attacks using nmap and hping3 and confirming successful detection of all three attack types
- Overcame significant technical challenges including Windows interface naming differences, ARP vs ICMP protocol behaviour on local networks and Npcap driver configuration

Poultry Management System | React, JavaScript, HTML, CSS, Tailwind CSS | July 2025 — Present

- Developing a comprehensive web-based platform to help smallholder farmers track and manage poultry farm operations in Lilongwe
- Built an intuitive dashboard using React to monitor flock inventory including bird count, breeds, ages and health status
- Implemented feed management module tracking consumption patterns, costs and stock levels

- Created production tracking system recording daily egg collection, mortality rates and vaccination schedules
- Designed mobile responsive interface with Tailwind CSS ensuring accessibility on smartphones and low bandwidth connections
- Integrated financial tracking features to help farmers make data driven decisions
- Currently deployed as a pilot programme with 10 local farmers in Lilongwe receiving positive feedback.

Personal Portfolio Website | HTML, CSS, JavaScript | 2025

Live: thando-rgb.github.io

- Developed a responsive portfolio showcasing projects and technical skills with smooth-scroll animations and mobile first design.
- Implemented smooth scrolling and interactive animations for enhanced user experience.

TECHNICAL SKILLS

- Languages: Python, JavaScript, HTML/CSS
- Frameworks: React, React Native, Next.js, Flask, Tailwind CSS
- Security: Scapy, Kali Linux, Network Security
- Tools: Git, Linux, Node.js, Networking
- Mobile Development: Flutter, Swift
